

Skills and Sample Questions for the No-Calculator Part of the Math Test

Here are some recommend skills areas that are likely to show up in the 5 test questions for which you cannot use a calculator.

- Comparing positive and negative numbers, with or without a number line. (Could include decimals and fractions.)
- Basic number skills such as distributive properties and multiples and factors (such as, least common multiple, LCM, or greatest common factor, GCF)
- Rules of exponents, including negative exponents, fractional exponents and multiple operations with exponents
- Absolute value and distance between numbers on the number line
- Order of operations with decimal numbers, fractions, mixed numbers or negative numbers
- Computations and numerical expressions with squares and square roots with rational numbers; non-perfect square roots.
Example: $\sqrt{12} = \sqrt{(4)(3)} = 2\sqrt{3}$
- Computations and numerical expressions with cubes and cube roots with rational numbers

- How to determine when a numerical expression is undefined (Examples: division by zero, square root of a negative number)

NOTE: a rational number is

- Any number that can be expressed as the quotient or fraction, a / b of two integers (the numerator “a” and a non-zero denominator “b”.)
- Since “b” may be equal to 1, every integer is also a rational number
